

# Who is Equigy

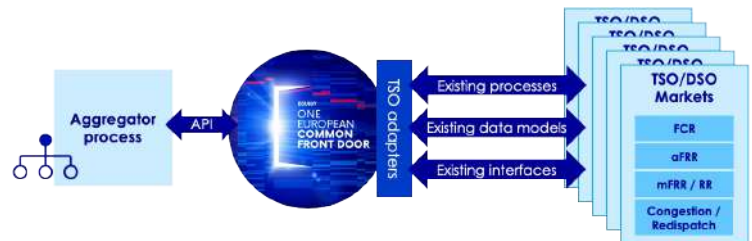

Equigy is a subsidiary joint venture of 6 European TSO's, with the goal of integrating distributed flexibility into our electricity grid.

We enable smaller distributed flexibility assets to participate in the energy system through aggregation.

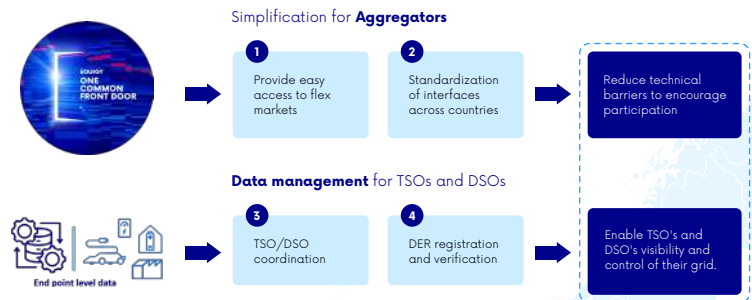

# Equigy platform

Equigy's Crowd Balancing Platform (CBP) offers the digital infrastructure for aggregated DER to participate in flex markets. The CBP acts as a gateway to simplify and standardize the connection to TSO systems.

# What Equigy offers

Equigy offers one common front door to the TSO markets across Europe. Its digital infrastructure enables simplification for the market and visibility for the TSO and DSO. This enables flexibility service providers to maximise revenue by easy participation to balancing services and redispatch.

# Join us

## TSO/DSO

- Increase the pool of flexibility service providers
- More grid visibility and control by access to data across multiple markets at higher granularity

## AGGREGATOR

- Additional revenue stream
- Easy expansion across markets
